EDUCATION

Texas A&M

Bachelor of Science - Major in Computer Engineering, Minor in Mathematics

College Station, TX

Graduated May 2026

PROJECTS

Zoho Data Automation Tool | *Python, Excel, Power BI, Zoho API*

May 2025 – July 2025

- Developed a Python script to retrieve data from Zoho Desk and FSM APIs for tickets, work orders, and requests
- Formatted and inserted data into structured Excel sheets for reporting and integration
- Automated Power BI workbook launch and refresh for real-time dashboard updates

YOLO Object Detection on TFA Videos | *C++, Vitis AI, OpenCV, YOLOv4-Tiny*

Aug 2025 – Dec 2025

- Developed an object detection pipeline using specialized YOLO models for drones, vehicles, and humans to improve per-class accuracy
- Designed and tested real-time detection on video input, optimizing system performance for constrained hardware
- Trained models with custom datasets and validated performance through iterative test procedures and analysis

Roguelite Game Development | *Unreal Engine 5, Blueprints, Git*

Jan 2026 – Present

- Developing a complex 3D roguelite within Unreal Engine 5, focusing on modular inventory systems and weapon attachment frameworks.
- Architected player controller logic and dynamic UI drag-and-drop systems using a combination of Blueprints and Data Assets.
- Collaborating in a team environment to iterate on gameplay mechanics, utilizing Git for version control and project organization.

AWS Cloud Portfolio | *AWS (S3, CloudFront, Route 53), GitHub Actions, HTML/CSS*

April 2026 – June 2026

- Engineered a high-availability portfolio website using AWS S3 for static hosting and CloudFront as a CDN for global distribution.
- Managed DNS records and SSL/TLS certificates via Route 53 and AWS Certificate Manager to ensure secure, low-latency user access.
- Automated the deployment pipeline using GitHub Actions to synchronize repository changes directly to the S3 bucket upon push.

EXPERIENCE

Data Analytics Intern

May 2025 – July 2025

KW Internationals

Plano, TX

- Built centralized Excel dataset from 3 years of operational data for real-time business reporting
- Maintained and updated Power BI dashboards to reflect current operational trends and improve decision-making accuracy
- Supported an automation initiative with Samsung by visiting warehouse pilot sites and observing deployment of Reflex Robotics' solutions
- Developing a Python-based tool to automate Zoho Desk and Zoho FSM data retrieval via API and compile tickets, work orders, and requests into a master Excel file with Power BI visualization

Engineering Technician (Software Systems)

June 2026 – Present

US Modules

College Station, TX

- Maintained, containerized, and scaled a full-stack maintenance management platform using Docker Compose, FastAPI, and PostgreSQL.
- Resolved critical backend challenges by performing complex database schema migrations and troubleshooting SQL transaction failures to guarantee system uptime.
- Iterated on platform functionality by integrating internal user feedback, resolving edge-case bugs, and streamlining operational workflows.
